

The governed operating layer for the AI-run company.

The business lives in AMOS. The AI is the operator.

AI can reason. Most companies still can't let it act.

Company truth is scattered across disconnected applications. Every model session starts with partial context, while consequential actions still land on a human desk.

01 **Fragmented context**

Data, apps, documents and history live in separate silos.

02 **No safe action layer**

Chat produces insight; humans still translate it into work.

03 **No durable learning**

Intent, approval and outcome disappear into tickets and chats.

Models will keep changing.

Your company endures.

AMOS holds the durable company memory, connections, rules, permissions, actions and proof. Claude, GPT, Codex—or the next great model—operates through the same governed surface.

[Open the 71-second video ↗](#)

Change the intelligence without reconnecting the company.

Every action leaves proof. Every proof improves the next action.

A receipt binds intent, context, policy checks, approval, evidence and outcome. Over time, that becomes governed organizational learning—not a pile of chat history.

The receipt graph compounds across actions, workflows, people and outcomes.

The intelligence follows the company home.

THE MECHANISM

Route locally. Escalate selectively.

AMOS qualifies each workflow, handles routine work on owned hardware, and escalates only the hard tail. Every escalation is receipted—and becomes a governed improvement signal.

“The margin curve improves as the measured local share compounds.”

PROOF, NOT PROMISE

120B open intelligence on owned hardware

01 Full GPT-OSS 120B runs on a 64 GB M1 Max—where stock full-Metal cannot.

02 Local and AWS controls passed the same hidden coding tests: 3/3.

03 Bit-exact async prefetch lifted coding-prompt prefill 70%.

Target: 80–90% local by workflow · frontier escalation stays governed and receipted

From “do this” to “pursue this goal.”

AMOS can observe the business, propose experiments, park consequential work for approval, act within policy, measure the result and continue the loop.

Humans set goals, budgets and boundaries.

Agency can tighten policy; it can never loosen it.

Land with one urgent workflow. Expand into the operating stack.

Start with a bounded pilot. Prove the outcome, then expand across workflows and the network.

01

Understand

Ask across finance, customers, documents and operations.

02

Act

Create campaigns, update systems and publish—with approval.

03

Automate

Run governed workflows across existing systems and bespoke apps.

04

Own the layer

Company memory, policies, proof and learning remain portable across models.

SMB → MID-MARKET →
ENTERPRISE

Beyond SaaS: building the backbone of the AI economy.

1M companies × \$10K = \$10B ARR—before infrastructure and marketplace upside.

01

Operating layer

70M+ U.S. + European
SMBs; governed memory,
actions and proof.

02

Smart infrastructure

Govern cloud through
MCP today; own compute
+ data centers when scale
justifies it.

03

AMOS Protocol

Makes capabilities
discoverable, governed
and billable across agents.

04

Marketplace

Builders sell connections,
workflows, goal adapters
and vertical apps.

**TAKE RATE + NETWORK
1.4% BASE PENETRATION**

Live, deployed and being used before broad distribution.

Public proof today

SMILEWISE

Dental SaaS

Treatment-planning software using AMOS as a governed build-and-operations environment.

NUVOLA ACADEMY

Compliance platform

A public-safety training product whose marketing and finance now run through AMOS.

PILOT STARTS NEXT WEEK

Network operations

A local franchise pilot with a defined path to wider network rollout if the measured outcome is proven.

Live playground

Real users + signups

Paid acquisition live

Enterprise pipeline active

Revenue expands as AMOS becomes more of the operating stack.

A recurring platform foundation, modular product expansion and metered infrastructure—all visible and attributable to the customer.

01

Platform subscription

Company brain, governed actions, proof, finance and the MCP control plane.

LAND

02

Modular expansion

Marketing + CRM, industry modules, bespoke apps and additional teams.

EXPAND

03

Metered + sovereign infrastructure

Managed models, sovereign local intelligence pods, SES and compute—billed with transparent usage.

SCALE

\$15–20M converts early pull into category speed.

At \$17.5M, we can deepen the platform, deliver enterprise deployments, and build repeatable distribution in parallel.

01

Build + trust

Product + platform — \$5.0M
Security + compliance — \$2.0M

40% · \$7.0M

02

Deploy + operate

FDE + customer success — \$3.4M
Enterprise onboarding — \$1.0M

25% · \$4.4M

03

Distribute + reserve

GTM + partnerships — \$4.1M
Local intelligence + compute — \$2.0M

35% · \$6.1M

COMPETITIVE POSITION

Others provide pieces. AMOS owns the operating layer between AI and the company.

CATEGORY	CONTEXT	ACTION	GOVERNANCE	PORTABLE	LEARNS	SOVEREIGN
Chat assistants	●	○	○	●	○	○
Point automation	○	●	△	○	○	○
Enterprise data platforms	●	△	●	○	△	△
AMOS	●	●	●	●	●	●

● native · △ partial · ○ not the core product

Enterprise credibility. AI-native execution. Capital-efficient scale.

RICK BARKLEY

Founder & CEO

Built and sold enterprise software before. Now translating hands-on experience in AI infrastructure, governed workflows and autonomous research loops into a product real companies can adopt.

“The AI is the operator. AMOS is the governed layer it operates through.”

GO-TO-MARKET

SMB wedge + enterprise pull

01 Problem-led campaigns → live playground → signup

02 Founder-led sales into regulated and operationally complex companies

03 Builder/reseller path turns one vertical solution into many downstream accounts

Engineering across SF · Austin · Lisbon | US HQ: Austin · European HQ + EU/sovereign expansion: Lisbon

The governed operating layer every company needs.

Raising \$15–20M to turn early pull into the category-defining governed operating layer.

PRODUCT

Harden product + enterprise trust

DISTRIBUTION

Turn pilots into repeatable expansion

ROUND SIGNAL

\$15–20M · seeking lead · Active Capital follow-on interest
